

Connected Operations

Manual processes hold back performance

When shop floor processes rely on paper, spreadsheets, and manual logging, your visibility and consistency suffer. Quality checks take too long. SOPs are hard to access. And frontline teams end up spending more time recording tasks than performing them.

Universal challenges:

- Quality checks are time-consuming and prone to human error
- SOPs, forms, and checklists live scattered in too many places
- Manual processes make it difficult to scale or improve operations

Factbird delivers:

- Digital SOPs, quality checks, and auto-triggered forms – all in one place
- Standardized workflows across shifts, teams, and the entire organization
- An intuitive and user-friendly interface that gets teams up and running fast

Your results:

- Increased compliance and clearer traceability of production records
- Better collaboration across roles and sites
- Improved team performance and day-to-day productivity

Connected Operations

“ Digitalization makes life easier for operators and ensures information for quality control and optimization is always accessible, greatly enhancing production efficiency.

The system allows line workers to focus on their core tasks instead of spending time collecting data.”

– Georg Christoph, Plant Manager at Ditsch
