PREVENTIVE MAINTENANCE

Your fast track to preventive maintenance

Expand the power of Factbird with the Preventive Maintenance module. Setup does not require complex PLC data integration with CMMS or daily manual entry of cycle counts into the system, it utilises your existing Factbird data. Now you can automatically generate maintenance tasks, notify teams, and manage work orders on a user-friendly dashboard.

Synchronize maintenance scheduling with actual live production cycle

Digitize and streamline preventive maintenance without complex integration

Utilize downtime analytics to spot and resolve issues within one tool.

Dynamic, data-driven auto maintenance scheduling

Factbird's Preventive Maintenance module transforms the way you manage your machinery by allowing you to synchronize your maintenance schedules with the actual production cycles, not just calendar time. Schedule repeating maintenance tasks dynamically based on machine use and make sure you get the most out of your machinery.

Real-time downtime analysis for quicker problem resolution

Use the powerful downtime analytics of Factbird to act quickly when issues arise. Spot recurring issues and start planning for prevention, all within the same system.

Factbird's Preventive Maintenance module is perfect if...

- You have no maintenance system in place
- You are dissatisfied with your existing maintenance software
- You want to upskill operators and empower operator-driven maintenance
- You aim to drive more impactful preventive maintenance through downtime analysis
