

MANUAL PROCESS LINE

Gain Visibility of your Manual Manufacturing Processes

The Factbird Cloud Application's manual process line feature provides comprehensive visibility into manual operations such as manual assembly and packaging stations. It digitizes these processes, giving frontline workers instant feedback and enabling continuous improvement.

Instant visibility of manual processes in the Factbird Cloud App

Empower frontline operators with accurate, real-time feedback

Analyze downtime, scrap, and waste to increase productivity

Digitize manual processes

The Factbird manual process line feature is ready-to-use web-based software where operators can easily and intuitively log downtime, part or product counts, scrap, and scrap reasons. The data is analyzed and visualized in the Factbird Cloud Application, which is accessible on any device with a browser.

Real-time visibility

Digitize and visualize manual processes with this affordable manufacturing tool that has been designed for various factory operations where collecting process data was previously challenging.

Application examples:

- Food and beverage manual packaging, cartoning stations
- Pharmaceutical manual bagging, bulk packaging stations
- Automotive parts manufacturers
- Industrial components manufacturers
- Medical devices manufacturers
- Injection molding assembly stations
