

# Digitize Manual Scrap Counting for Better Quality and Compliance

Transform your quality and compliance control with the Factbird Manual Production Counter. This feature digitizes manual scrap and rework counting, providing clear visibility into quality and compliance metrics. Now you can elevate your line effectiveness by analyzing merged data from automated processes and manual subprocesses.

Real time visibility of quality metrics, such as scrap and rework counts

Digitize and streamline paper based manual counting for easier analysis

Use more granular scrap data to increase overall line effectiveness

## Improve quality and compliance

The Factbird Manual Production Counter feature is ready-to-use web-based software where operators can easily and intuitively log scrap or rework by type, digitizing manual processes in the factory. The data is analyzed and visualized in the Factbird Cloud Application, providing detailed scrap data, such as scrap counts by type, batch, and shift.

## Digitize manual counting

Digitize and visualize manual scrap counting processes with this affordable tool that improves visibility into quality metrics, helps reduce scrap and waste, and improves overall effectiveness.

### Application examples

- Food and beverage scrap counting
- Pharmaceutical rework counting
- Manual scrap detection by operators
- Manual quality control by operators
- Manual quality assessment
